Axtion® DP Takes A Step Ahead

The 1E58 Axtion® DP foot has a distinctive heel which lessens force without reducing energy return for a vigorous stride. This foot/pylon system is ideal for high activity patients.

It is lightweight and designed to provide up to eight degrees of rotational movement in each direction. The S-style pylon provides better flexion for a more effortless step. A heavy duty carbon fiber toe plate allows for control and energy return at toe off. The heel rigidity is available in standard, softer or firmer options for varying patient needs.

For more information, call your local Lehneis Patient Care Center. □
